

## TOUGH RINGS FOR HARSH CONDITIONS

With more and more land being developed each year and irrigation turning marginal ground into productive pasture, agricultural gear is being severely tested.

The DuraForge® roller ring is our answer for farmers and contractors working stony virgin ground or ex forestry blocks, where impact and breakage from foreign objects is a daily occurrence.

### GGG 50 – UNBREAKABLE PROPERTIES

The GGG 50 cast steel material used to produce the DuraForge® roller rings has very high impact resistance qualities, and a lot greater hardness level than conventional cast rings. This material is commonly found in industrial and construction equipment applications, where extra high-strength properties and fail-safe reliability is required. For peace of mind and zero downtime, insist on specifying your roller with the unbreakable DuraForge® rings.

**DuraForge®** Leading technology exclusively on Titan Rollers.
